

ZUMM 

Z14 GO RANGE

**A NEW WAY
OF DRINKING
JUICE**

Are you ready for GO?

GO is a new way of consumption:
immediate, on-the-go, healthy
and quality.

NEW

Z14 NATURE 16 CONTACTLESS^{GO}

Ref. Z114x16TA-N-***

Make it easier

This version of Z14 Nature has the latest technology in cashless payment systems.

When payment is made, the machine is activated, squeezing the juice instantly without the need to touch the juicer at any time.

16 Fruits per minute

16 kg Feeder

18 l Container capacity

EVSO^{ADVANCED}

Z14 NATURE 16 SELECT^{GO}

Choose your product

With Z14 Nature Select you can choose the format of juice to be consumed, for example, whether you want to drink it in a glass or in a bottle, and even the size of the container. How? By using the touch screen selector or by scanning the barcode on the container directly with the integrated Barcode Scanner. The machine will recognise the product and squeeze out the right amount of fruit to fill the packaging. All that's left for you to do is proceed to the checkout.

16 Fruits per minute

Touch screen

With an intuitive interface developed specifically for this model, the customer can select the different product variants available for sale.

The products are added from the same screen through the administrator function and allows the possibility of having up to four different products active, configurable by type (glass, bottle) and size (S,M,L,XL).

Barcode Scanner

Integrated barcode reader connected to the touch screen interface. Zero contact.

Pulse or MDB?

On Z14 models with integrated cashless payment system, it is possible to choose between **two types of machine-to-payment system communication protocol**. These protocols are **Pulses** and **MDB***.

Pulses

The machine-to-payment system communication is bidirectional i.e. the service is charged at the moment the card is swiped, just before the squeezing process starts.

MDB

The machine-to-payment system communication is multiple and recognises the start and end of the squeezing. This means that the operator can choose between charging before the service (as with the Pulse method) or charging after confirming that the squeezing has been carried out correctly and the customer has obtained his juice.

WHY CHOOSE US?

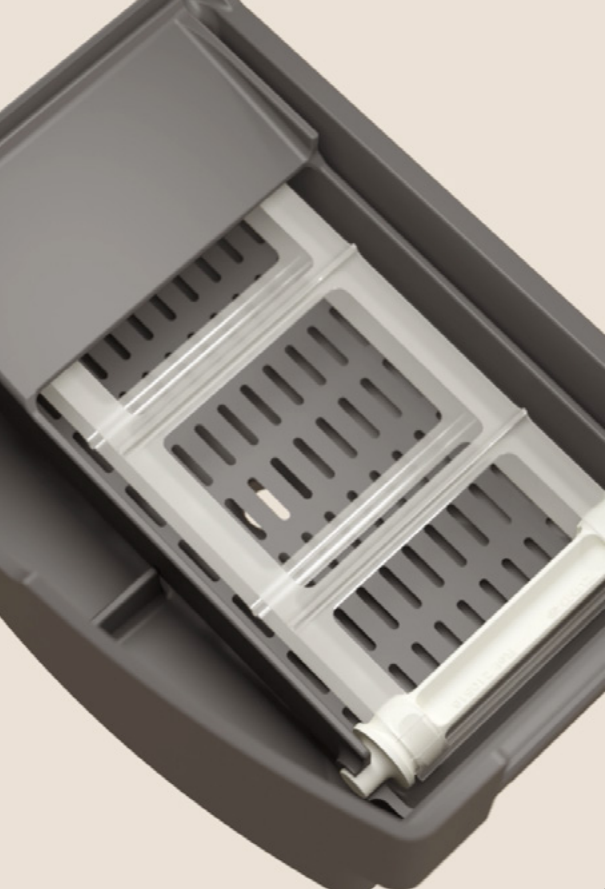

All our product lines are designed on the same premise: the search for the perfect juice.

EVS 
ADVANCED

Zummo's exclusive squeezing system, designed and developed to squeeze the fruit vertically, very precisely, by means of pressure, based on the traditional squeezing system. It allows for greater yield and profitability in the squeezing process, guaranteeing maximum profit.

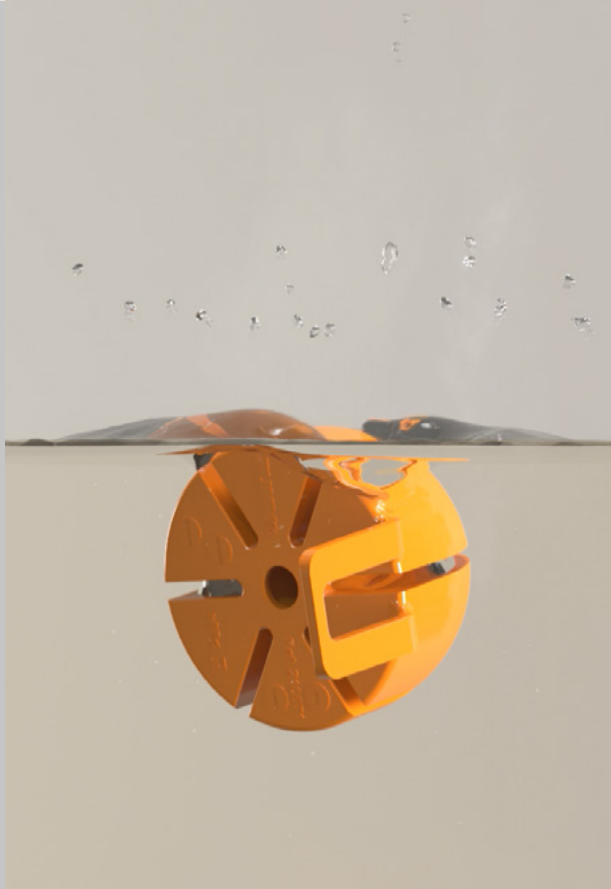

Automatic filter

It has a direct impact on the high performance of the juicers. Fully integrated into the machine, it starts moving when the juicer is activated, sweeping any seeds and pulp that may remain on the filter after the juicing process.

EasyClean

The juice extraction process has been developed to minimise splashing of the squeezed fruit, reduce the pulp residues generated and avoid clogging of the peel. In addition, the cleaning process of the parts is very easy and intuitive, providing great usability to the operator and maximising autonomy.

Closed Chamber

Closed Chamber is a concept of integral connection of the parts that make up the juicer. This system combines usability with the greatest possible hermeticity and protection of the juicer system, as it prevents the entry of external agents, guaranteeing maximum safety for the consumer.

SimpleClick

New ball locking system with just one movement, standard on all versions of the Z14 Nature model.
